ABOUT THE CONFERENCE

The 2026 International Conference on Smart futuristic Technology (ICSFT) is the most prestigious technical event in the series of conferences which are devoted to Smart Generation Technologies in the area of Computing ,Networking & communication and storage. ICSFT is now recognized as the main regular event of the world that is covering many dimensions including security algorithms and architectures, privacy-aware policies, regulations and techniques, anonymous computation and communication, encompassing fundamental theoretical approaches, practical experimental projects, and commercial application systems for computation, communication and storage. As applications of computer systems and networks have permeated in every aspect of our daily life, the issues of security, privacy, and anonymity have become increasingly critical. The conference will provide a forum for the world-class researchers to gather and share their research achievements, emerging ideas and trends in the highly challenging research fields.
